EVENT

AWS Security Forum

Building Securely

📅 TUESDAY, 19 SEPTEMBER 2023 | ICC Sydney

Build securely in a rapidly evolving landscape

Welcome to the AWS Security Forum, Sydney. This year's in-person event will bring together security leaders and experts from around the world to showcase how building securely is the path of least resistance. We will uncover how partners and customers have streamlined their security practices, ensuring a frictionless path to protect their organisations.

Three reasons to attend:

Event Details

Date: Tuesday, 19 September 2023

Time: 9:00 AM – 5:30 PM

Venue: ICC Sydney, 14 Darling Dr,
Sydney NSW 2000 ([view map](#))

This track will show you the way to reinforce the security of the software that you build in the cloud. Join us if you are an application developer, DevOps engineer or any builder who wants to level up their security skills and become a security champion.

2:00pm - 2:40pm

Rethinking the "Sec" in DevSecOps for modern architectures

Using third-party or open-source software components can help reduce cost, speed up time to market, and free staff up to engage in more innovative and value-adding activities. But how can organizations ensure that third-party software and development processes are secure? And what is the "right way" to evaluate the security of software packages? A holistic DevSecOps approach applies best practices and tools from the early stages of the software development life-cycle to continuous delivery, continuous testing, and continuous scanning and monitoring. This presentation will evaluate the AWS service offerings such as AWS Security Hub, AWS Organizations, AWS IAM, plus popular third-party tools.

Speakers:

Maria Sokolova, Senior Solutions Architect, AWS
Gerald Bachlmayr, Principal Cloud Architect, Cuscal

In this session, learn how modern tools can improve your development workflow and security when building applications in the cloud. You can use AWS Toolkit within your IDE of choice to access AWS environments, and leverage tools such as Amazon CodeWhisperer to provide AI-powered coding recommendations when developing applications. In addition, Amazon CodeGuru can identify vulnerabilities in code, provide recommendations on how to fix the identified vulnerabilities, and track the status of the vulnerabilities until closure.

Speakers:

Paul Kukiel, Enterprise Solution Architect, AWS

Matt Coles, Principal Engineer, AWS

3:30pm - 3:45pm

How SaaS provider Playvox is Scaling Securely across multiple Geo's

Global SaaS provider Playvox shares their evolution and the criticality of expanding their security engineering and continuous network monitoring in tandem with their growth. Discover how Playvox's security team and culture strategy has facilitated the development of a scalable security approach aligned with their business expansion. Playvox has been able to meet customer requirements during their international growth by simultaneously implementing security practices that maximise the ability for their engineering teams to build faster and securely.
